LEGAL DISCLAIMER

Advertising: This document constitutes Advertising within the meaning of article 68 of the FinSA.

Risk disclosure: Investments in products referencing one or more cryptocurrencies or indices of cryptocurrencies are subject to increased volatility compared to investments in traditional assets and to specific risks which can negatively impact the value, tradability, liquidity and/or security of such investments. Potential Investors are encouraged to inform themselves about these specific risks when considering an investment in products referencing one or more cryptocurrencies or indices of cryptocurrencies.

Key risks relating to products referencing one or more cryptocurrencies: The list below summarizes key risks that may negatively impact the value, tradability, liquidity and/or security of a product referencing one or more cryptocurrencies or indices of cryptocurrencies (a "Cryptocurrency Product"). The list is not intended to be comprehensive. Potential Investors should consider the risks relating to the specific product before taking an investment decision.

Volatility of cryptocurrencies: The value of cryptocurrencies may change significantly, including on an intraday basis. Changes and developments in technology, fraud, theft and cyber-attacks and regulatory changes, among others, may increase the volatility of cryptocurrencies significantly. The value of cryptocurrencies may, as a result, be volatile and diminish to zero. This may potentially result in losses to Investors in Cryptocurrency Products. If Investors are purchasing cryptocurrencies or Cryptocurrency Products as a form of investment with the expectation or desire that their inherent, intrinsic or cash-equivalent value may increase with time, Investors assume all risks associated with such speculation or such actions, and any errors associated therewith.

Illiquidity of cryptocurrencies: Cryptocurrencies might be or become illiquid over the lifetime of a Cryptocurrency Product. The market for cryptocurrencies is still at an early stage and the number of market participants is limited and may stay limited over the lifetime of a Cryptocurrency Product. A small number of market participants may result in potentially significant (and adverse) price swings and illiquidity. Leonteq does not anticipate creating any secondary market for the cryptocurrencies that are the underlyings of the Cryptocurrency Products. Where a secondary market of cryptocurrencies is facilitated by third-party trading venues, such trading venues may be relatively new and subject to little or no regulatory oversight, making them more susceptible to fraud or manipulation, or alternatively, the trading venues may be shutdown or highly constrained by new regulatory oversight. Illiquidity of a cryptocurrency may negatively impact the availability of a secondary market for Cryptocurrency Products or may result in a temporary or even indefinite increase of the bid/offer spread for Cryptocurrency Products or in the (early) termination of certain Cryptocurrency Products.

Risk relating to technology: Technology relating to cryptocurrencies is still at an early stage and best practices are still to be determined and implemented. The technology is likely to undergo significant changes in the future. Technological developments in cryptography, code breaking or quantum computing etc. may pose a risk to the security of cryptocurrencies and may facilitate price manipulation or forced consensus attacks by miners and others. In addition, alternative technologies could be established, making cryptocurrencies less relevant or obsolete. The functioning of cryptocurrencies may rely on (potentially open-source) software. Developers of such software are not employed or controlled by Leonteq, a hedging counterparty thereof or any other party related to Cryptocurrency Products. Developers may introduce weaknesses and programming errors into the software or may stop developing the software (potentially at a critical stage where a security update is required), keeping cryptocurrencies exposed to weaknesses, programming errors and threats of fraud, theft and cyber-attacks (see also "Fraud, Theft and Cyber-Attack Risk"). The inability to implement required changes to technology relating to cryptocurrencies may negatively impact Leonteq's ability to provide a secondary market for Cryptocurrency Products and may result in an increased bid/offer spread (potentially indefinitely) for Cryptocurrency Products.

Fraud, theft and cyber-attack risk: The particular characteristics of cryptocurrencies (in particular as a result of only existing virtually) make it an attractive target for fraud, theft and cyber-attacks. Investors in Cryptocurrency Products are exposed to fraud, theft and cyber-attacks regarding the underlying cryptocurrencies. Such events may raise skepticism over the long-term future of the relevant cryptocurrencies and may prevent the establishment of such cryptocurrencies as legal tender. This may negatively impact the value, tradability, liquidity and security of the relevant cryptocurrencies. Losses may occur to the Investors in the Cryptocurrency Products as a result of such events.

Connected party risk: Depending on the relevant cryptocurrencies and the design of such cryptocurrencies (centralized, decentralized), certain connected parties (management, developers, miners etc. as applicable) may pursue a strategy which may negatively impact the value, tradability, liquidity and security of the cryptocurrencies. As a result, losses may occur to the Investors in the Cryptocurrency Products.

Regulatory risk: Cryptocurrencies and Cryptocurrency Products have been in existence for relatively short time only and various regulatory bodies in Switzerland and globally have or are in the process of taking a view on required regulatory actions relating to cryptocurrencies and related products (e.g. regulation concerning money laundering, taxation, consumer protection, publication requirements or capital flows, market abuse, etc.). Any forthcoming regulatory actions may result in the illegality of certain cryptocurrencies (and products relating thereto) or the implementation of controls relating to the trading (and therefore liquidity) of such cryptocurrencies (and products relating thereto). Forthcoming regulatory actions may also restrict the availability of markets and/or market participants permitted to engage in transactions related to cryptocurrencies (and products relating thereto). In addition, control mechanisms may increase transaction fees in affected cryptocurrencies significantly (and therefore impact the bid/offer spread of the relevant Cryptocurrency Products). Potential Investors should ensure that investing in Cryptocurrency Products complies with their local regulation.

No supervision: Cryptocurrencies do not have a function as, and/or the full characteristics of, legal tender and are currently not supervised by any authority or institution such as a central bank. Consequently, there is no authority or institution which may intervene in the cryptocurrency market to stabilize the value of cryptocurrencies or prevent, mitigate or counterbalance irrational or erratic price developments of cryptocurrencies. As a result, losses may occur to the Investors in the Cryptocurrency Products.

Risk relating to public data: Potential Investors should be aware that any purchase and sale of cryptocurrencies is stored in a ledger and may be visible to the public. Such ledger is neither a property of nor under control of Leonteq, a hedging counterparty thereof or any other party related to the Cryptocurrency Products. Information available on the ledger may be exploited or miss-used in, as of today, unforeseen ways.

Trust in cryptocurrencies: Cryptocurrencies only exist virtually and have no physical equivalent. Establishing a value for a cryptocurrency is or may become difficult as the value depends on the expectation and trust that such cryptocurrency has a future use. Among others, persistent high volatility, changes and advances in technology, fraud, theft and cyber-attacks and regulatory changes may prevent the establishment of the relevant cryptocurrency for future use and potentially rendering such cryptocurrency worthless.

No direct access to cryptocurrency/no transfer: Investors in Cryptocurrency Products do not have direct access to the underlying cryptocurrencies or all information relating to cryptocurrencies (among others such as information about storage, service provider(s) used for trading the cryptocurrencies or the so called "private keys" required for accessing and transferring the cryptocurrencies) and cannot transfer the cryptocurrencies related to the Cryptocurrency Products to a private storage facility.

Limited trading hours: Investors should note that cryptocurrencies typically trade 24 hours on all weekdays (incl. Saturday, Sunday and public holidays). The trading hours of Cryptocurrency Products are however restricted to the business hours in accordance with the applicable terms of the relevant Cryptocurrency Products. Investors therefore cannot invest in or divest Cryptocurrency Products and react to price movements or volatility of the underlying cryptocurrencies outside the Cryptocurrency Products' trading hours.

Adjustment event risk: One or more adjustment events as defined in the terms of a Cryptocurrency Product (each an "Adjustment Event") may occur. Trading venues on which the relevant cryptocurrencies are traded may suspend (temporarily or indefinitely) the ability to trade the relevant cryptocurrencies or in the case of a so-called hard fork a particular version of the cryptocurrencies. Consequently, the Investors in Cryptocurrency Products (i) may not get exposure to all versions of the relevant cryptocurrencies following a hard fork, or (ii) may get exposure to a version on a delayed basis (in which case that version might have a significant change in its value), or (iii) may not benefit or be negatively affected by an Adjustment Event relating one or more cryptocurrencies. Following an Adjustment Event, Leonteq may make (but has no obligation to make) an amendment to the affected Cryptocurrency Products and/or referenced cryptocurrencies in its reasonable discretion (billiges Ermessen). In addition, Adjustment Events may result in instability of the relevant cryptocurrencies or a version thereof and Adjustment Events or the threat of a potential Adjustment Event may prevent the establishment of a cryptocurrency. (Potential) Adjustment Events may negatively impact Leonteq's ability to provide a secondary market for Cryptocurrency Products, may result in an increased bid/offer spread (potentially indefinitely) for Cryptocurrency Products or result in the (early) termination of certain Cryptocurrency Products.

Risk relating to reference sources: Cryptocurrency Products use reference sources to determine the price and other information of the underlying cryptocurrencies. Such reference sources (i) may cease to exist, or (ii) regulatory requirements and Leonteq's internal compliance requirements may prevent Leonteq to use a particular reference source going forward. Leonteq (or a hedging counterparty thereof) has an unconditional right to remove, add or change one or more reference sources at any time, but in accordance with the terms of the relevant Cryptocurrency Products and, for listed products, in the form as permitted by the rules and regulations of the SIX Exchange Regulation AG.

Taxation risks: The tax characterization of investing in cryptocurrencies or Cryptocurrency Products may be uncertain. Any Investor should consult with its own tax advisor prior to investing in the Cryptocurrency Product. In addition, Investors should be aware that taxation with respect to the underlying and therefore this product may (adversely) change over the lifetime of the Cryptocurrency Product.
